

Birdseed Eggs

“Hide” eggs for the birds. You can put them in trees and around the yard for birds (and some pesky squirrels). It’s super easy and uses only 2 ingredients.

1 box of gelatin mix, we use unflavored. 10 cups bird seed, any type should work. Prepare the gelatin as directed on the box. Then mix in your bird seed. We usually do 1/2 of it at a time, so half the gelatin and 1/2 the bird seed. Spray cooking spray in the eggs, so they come out easier and then pack with the mixture. Put in the fridge to let set. 10 cups make 3-4 dozen normal-sized eggs.

Edit: You can make this educational with counting for the younger kids. You can use measurements or figure out amounts for 1/2 the recipe for older. You could also hypothesize on type of birds and how long the eggs will last.
